

- Please order power supplies separately

In view of the progressive spread of PoE (Power over Ethernet), the plug switching power supplies are no longer automatically part of the delivery of a sensor controller with immediate effect.

If required, please order a [plug-in or DIN rail switching power supply](#) separately.

- Revised mounting case

Our mounting cases are now equipped with a "RJ45 Feedthrough" as standard thus the network cable can be plugged in directly.

The [mounting cases](#) are now also available with or without (for operation with PoE) DIN rail switching power supply.

Please also note the new prices.

- Standard sensor

The [round standard sensor](#) Ø6 x 50mm is now "official" in the product portfolio. It is available with 3 or 10 m fixed connection cable as standard.

- Complete price list revised accordingly

As always, you will find the changes clearly arranged in our overall price list.

[Products and Prices €](#)

- System Manual updated

Our [system manual](#) has been updated to fit version 2.94.7.
